If checked, see the attached BidBuy Purchase Order for a Description of Supplies and/or Services.

- 1.2. **MILESTONES AND DELIVERABLES:** All of the items as listed are specified by manufacturer and manufacturer's product number. Specifications are to establish standards of quality and performance and not for the purpose of limiting competition.

1.2.2. Quantities: It shall be expressly understood by the bidder that the estimated bid quantities specified in the contract documents are for the purpose of determining the lowest bid and to establish unit prices. The Tollway may, over the term of the Contract, place orders for more or fewer than the estimated quantities stated. Materials furnished under this contract shall be delivered in multiple deliveries as determined by the needs of the Illinois Tollway. The Illinois Tollway does not require that the awarded vendor order in the entire contract quantities listed herein and keep them in stock on their premises until ordered by the Tollway. The Illinois Tollway does however require the awarded vendor meets the minimum delivery timeframe for the delivery of the supplies/services as stated in the contract language. The decision to pre-order and hold any inventory required from this contract, rests solely with the awarded vendor. The estimated quantities of this contract shall be based on a period of two (2) years; prices shall remain firm for the term of the contract.

1.2.3. Return of Goods: The Illinois Tollway may find it necessary to return materials purchased under the contract if they become unusable due to a change in requirement. If the replacement merchandise or a credit is not received within ten (10) business days, the Tollway shall deduct the amount of the return from any outstanding invoice at the time of payment. The Tollway shall not be subject to restocking charges due to Vendor error. The Illinois Tollway shall not pay any restocking charges for incorrect, damaged, or defective items returned under the contract.

1.3. VENDOR / STAFF SPECIFICATIONS:

GROUP 1 – CHEMICALS - DETAILED SPECIFICATIONS

HOH C-457 Alkaline Cooling Chemical

HOH C-457 Alkaline Cooling Chemical is a highly concentrated liquid formulation that addresses all aspects of corrosion and deposit control in HVAC and process cooling water systems. C-457 employs state-of-the-art stabilized phosphonate technology yielding significantly improved high temperature hardness stabilization. C-457 includes benzotriazole, a highly efficient corrosion inhibitor for copper and its alloys. The polymer stabilized phosphonate technology employed is designed to control calcium carbonate, CaCO₃, scale and sludge in cooling tower water with up to 1200 ppm of hardness as CaCO₃. If higher levels of hardness must be stabilized, sulfuric acid may be used to safely allow maintenance of 4000 ppm of hardness or more. C-457 contains two polymeric dispersants designed to suspend captured air-borne debris, hardness precipitates, iron oxide, and organic debris. Good particulate dispersion is critical in controlling sludge and sediment accumulation in cooling towers. This is especially true where cooling water remains in a system over an extended period of time due to very slow turnover.

HOH A-215 Micro-Biocides

HOH A-215 Micro-Biocides is a non-oxidizing, broad spectrum, cationic microbicide ideal for controlling algae, bacteria and fungi in open recirculating cooling water systems. A-215 is highly efficient and cost effective in controlling bacterial slime formers, algae and fungi that commonly produce fouling deposits in cooling towers and related heat exchange equipment. A-215 contains 15% polyoxyethylene (dimethylimino) ethylene dichloride. A-215 is totally water miscible and is not sensitive to water hardness. The U.S. EPA recognizes A-215 as an anti-microbial agent for use in open cooling water systems, industrial air wash systems, and decorative fountains that do not contain fish, EPA Reg. No. 1448-212-12479. A-215 is best used where the pH of the recirculating cooling water is below 9.5. A-215 is compatible with most oxidizing and non-oxidizing biocides, corrosion inhibitors, anionic polymers and phosphonates used for cooling water deposit control. A-215 is well suited to work with and enhance the action of chlorine and bromine based biocides such as Chemicals DF-125 and BromiCide-T.

HOH A-615 Micro-Biocides

HOH A-615 Micro-Biocides is an EPA approved, broad-spectrum microbicide, effective over a wide pH range for use in cooling towers, air washers, and closed recirculating water systems. A-615 controls bacteria, algae and fungi at very low active levels (1 to 2ppm), without the development of resistant strains. A-615 consists of a 1.5% aqueous solution of mixed isothiazolins,

EPA Reg. No. 707-133-12479. A-615 is especially effective in controlling slime forming bacteria responsible for the formation of biofilm (mud) on heat exchange and other cooling system surfaces. A-615 is highly effective in controlling sulfatereducing bacteria and other organisms responsible for microbiologically influenced corrosion (MIC). A-615 is also very effective in controlling nitrogen cycle bacteria responsible for nitrite loss in closed recirculating water systems. A-615 kills micro-organisms by rapidly inhibiting the synthesis of the large, long chain molecules essential to the formation of protein, genetic transcription, and cell wall development.

HOH CS-39P

HOH CS-39P is a buffered nitrite closed system treatment containing organic and inorganic corrosion inhibitors for use in hot water boilers, hot and chilled water systems, engine jackets and other closed water systems.

the purported disbursement. The Vendor or subcontractors shall not impose a charge for audit or examination of the Vendor's or subcontractor's books and records. 30 ILCS 500/20-65.
