

Milhouse Engineering and Construction Inc.

Wilbur C. Milhouse III, President/CEO

As a child growing up in Chicago, Wilbur C. Milhouse III had dreams of becoming an engineer that were sparked by achieving excellence in the areas of math and science and ignited by the inspiration and support of his mother.

In his early days as an engineer, Wilbur gained experience through various opportunities that allowed him to perform structural analysis and design work for the Illinois Tollway. Building upon these first experiences, he later founded his own architectural engineering firm, Milhouse Engineering and Construction Inc.

During the past seven years, Wilbur has led his firm as the prime consultant on many Tollway projects, including providing construction management services for work on the Tri-State Tollway (I-94/I-294/I-80), pavement repairs and shoulder resurfacing on the Reagan Memorial Tollway (I-88) and the installation of a wireless technology

system that is integrated with the Tollway's operations.

Then, along came *Move Illinois*. Wilbur leads the Milhouse team in providing \$2.6 million in construction management services for advance work on a section of the Jane Addams Memorial Tollway (I-90).

Wilbur acknowledges that this steady Tollway work has enabled his firm to grow into a full-service engineering, design and architecture consulting firm serving 11 markets with a current staff of 80 employees.

"The Tollway is a sustaining force for small business. The work we're able to secure through the *Move Illinois* Program will continue to fuel our growth and help us realize our dreams."
