One-year extension of the Series 2008 A-1b Bondholder Agreement

Contract #: N/A**Vendor:** RBC Municipal Products, LLC (“RBCMP” or “Vendor”)

Description: Per the terms of the Bondholder Agreement with RBCMP supporting the Series 2008A-1b Bonds, the Vendor agrees to hold the bonds for a specified period of time at an interest rate equal to the 7-day SIFMA Index (“SIFMA”), an average rate of high-grade tax-exempt variable rate bonds, plus a spread. RBCMP purchased the bonds on February 3, 2017 for a three-year period at SIFMA plus a spread of 45 basis points (0.45%). This request is to extend that agreement approximately one year until February 1, 2021, at SIFMA plus a spread of 50 basis points (0.50%).

Scope: Authorize an extension of the Bondholder Agreement between the Authority and RBCMP for approximately one year, from February 3, 2020 to February 1, 2021.

Amount: The cost is essentially the spread charged over SIFMA, which is 50 basis points (0.50%) during the period of extension. In dollar terms, given the \$188,550,000 par amount of the bonds on 2/3/2020, declining to \$187,450,000 on 1/1/2021, the 50 basis points cost is \$937,350. Such cost is subject to increase in the event of an Authority default or rating downgrade. Authorization to pay related upfront fees and reimburse legal expenses is also requested.

Company Information: RBC Municipal Products, LLC is an affiliate of RBC Capital Markets, which is a subsidiary of Royal Bank of Canada, a Canadian multinational financial services company and the largest bank in Canada by market capitalization.

Contract Award – Tollway Sole Source

Contract #: 19-0151**Vendor:** Electronic Transaction Consultants Corporation; Richardson, TX

Description: Toll Revenue Management and Maintenance Program Services
(Subject to approval at the Sole Source Hearing on Date TBD)

Scope: This contract provides a source for the purchase of certain toll revenue management and maintenance program (“TRMMP”) services with the current vendor, Electronic Transaction Consultants (“ETC”) Corporation. Specifically, the Tollway is seeking a one-year sole economically feasible source contract for the support and maintenance of the Host System, as well as the support and maintenance of the legacy Violation Processing System (and its associated Customer Service Center System). The Host System is the central aggregator for lane transaction data, and it is critical to the collection of toll revenue. The Host System collects, sorts, and filters all toll transactions from the lanes, and then it sends those transactions to the customer relationship management system that serves as the revenue engine for the Tollway. For cash transactions, the Host System serves as the final system of record for the Tollway’s Money Room, where cash is received and recorded. *(Scope continued on page 3.)*

Amount: \$6,000,000.00

Company Information

Electronic Transaction Consultants Corporation is incorporated with 20 years in business and approximately 500 employees. They are a leading toll collection solutions and services provider that delivers electronic toll collection solutions through technology and operations services.

Contract Award – Tollway Sole Source

Scope: *(continued from page 1)*

The legacy Violation Processing System (and its associated Customer Service Center System) continues to enable the collection of aged debt, interfacing with the Tollway's collection agencies daily. And, although the systems have a significantly reduced processing footprint, as no new transactions are being added, customer service representatives also continue to take payments daily on the aged debt they hold.

The Host System processes 100% of the Tollway's one billion lane transactions annually, thus enabling our \$1.5 billion of annual revenues. The Violation Processing System (and its associated Customer Service Center System) is currently the repository for well over one billion transactions related to aged tolling debt. These systems are necessary to maintain uninterrupted revenues, including recovered revenues.

Today's electronic tolling technology and maintenance marketplace remains niche and evolving, which has made the breaking apart of the original large electronic tolling technology contract a slow process. While we continue to work on these last remaining parts of the original large contract, this sole economically feasible source contract will provide the lowest-risk option for preserving the integrity of the current roadways and will significantly mitigate the risk of revenue loss.
